

Innovative Engineered Solutions
for the Power Generation Industry.

TTS Power is a workgroup focused on the power generation industry. We are part of TTS Energy Services (TTS), formally Turbine Technology Services.

We provide economically sensible, operational results, thereby ensuring our client's success. Our capabilities are comprehensive and cover all areas of plant or station operations.

We utilize our 37 years of experience to help operators achieve full value from their existing assets by improving unit reliability and performance with high-value mechanical engineering and control expertise.

Based in Orlando, Florida, with a sales office in Houston, Texas, and channel partners all over the globe, our team of 40+ engineering professionals has traveled millions of miles serving more than 400 clients in over 100 countries.

We are ready to travel anywhere, often on short notice, to put our expertise to work, providing innovative solutions to power generation facilities across the globe.

TTS Power is full of smart, driven engineers and support personnel who care a lot more about getting the job done and done right, and the relationships we build, than about proving how clever we are. We become a valuable extension of our clients' teams. As a result, our people are the primary reason our clients recommend TTS to others.

We balance the engineering challenges we uncover with co-created solutions by engaging our clients and building relationships that endure.

We are an agile alternative to the OEMs, and it shows... It feels different to work with us.

We are a global engineering and technology company providing a wide range of technical solutions and capabilities.

More than 37 years in the turbine industry providing innovative solutions, high quality products and services, and engineering expertise.

Driven by our customer's needs:

- Emissions Compliance
- Power/Revenue Improvement
- Fuel Flexibility
- OEM Dependency
- Parts Availability & Management
- Reliability/Availability Improvement
- Maintenance
- Rapid Power Deployment

What we do:

- Commissioning Services
- Controls and Control Panels
- Gas Turbine Parts Supply
- Conversions, Modifications, and Upgrades
- Asset Performance Technologies
- Engineering, and OnSite Services
- Power Plant Services
- DynaFlex Performance Services
